OUR CHALLENGE #1

How can we create an all-in-one insurance solution for an individual?

Customers are often overwhelmed by the complexity of insurance products & policies and the coverage details that come with them. Eliminating policies by each line of business to have a “total coverage” approach that can be used up as different events happen allows to make complex product simple to understand for customers.

How might we help Tiffany
make the process of
acquiring and **updating**
multiple insurance policies
clear, simple, and
affordable?

SUMMARY OF IDEAS

An application/webpage that generates suggested insurances to get based on collecting personal info (age, no. of dependents, health concerns etc.) with costs listed

An application that keeps track of your policies and gives you the info you need every time you have to use it

An application/webpage that the person can contact 7/24 as soon as possible to find out the solution

A platform that simplifies/clarifies policies and premiums of the insurance the consumer sends in

A chatbot that knows what policies you have and can help you out

The app page has several categories. Under each category, there are details to policy of each type of insurance. Easy to find and access

An app that organizes each insurance and its policy separately

An browser extension that keeps track of you policies

A page on the app where recording the history of their insurance. how they use the insurance, or how much is covered. In case they forget. The agent can also access to with permission to help you make monthly plans

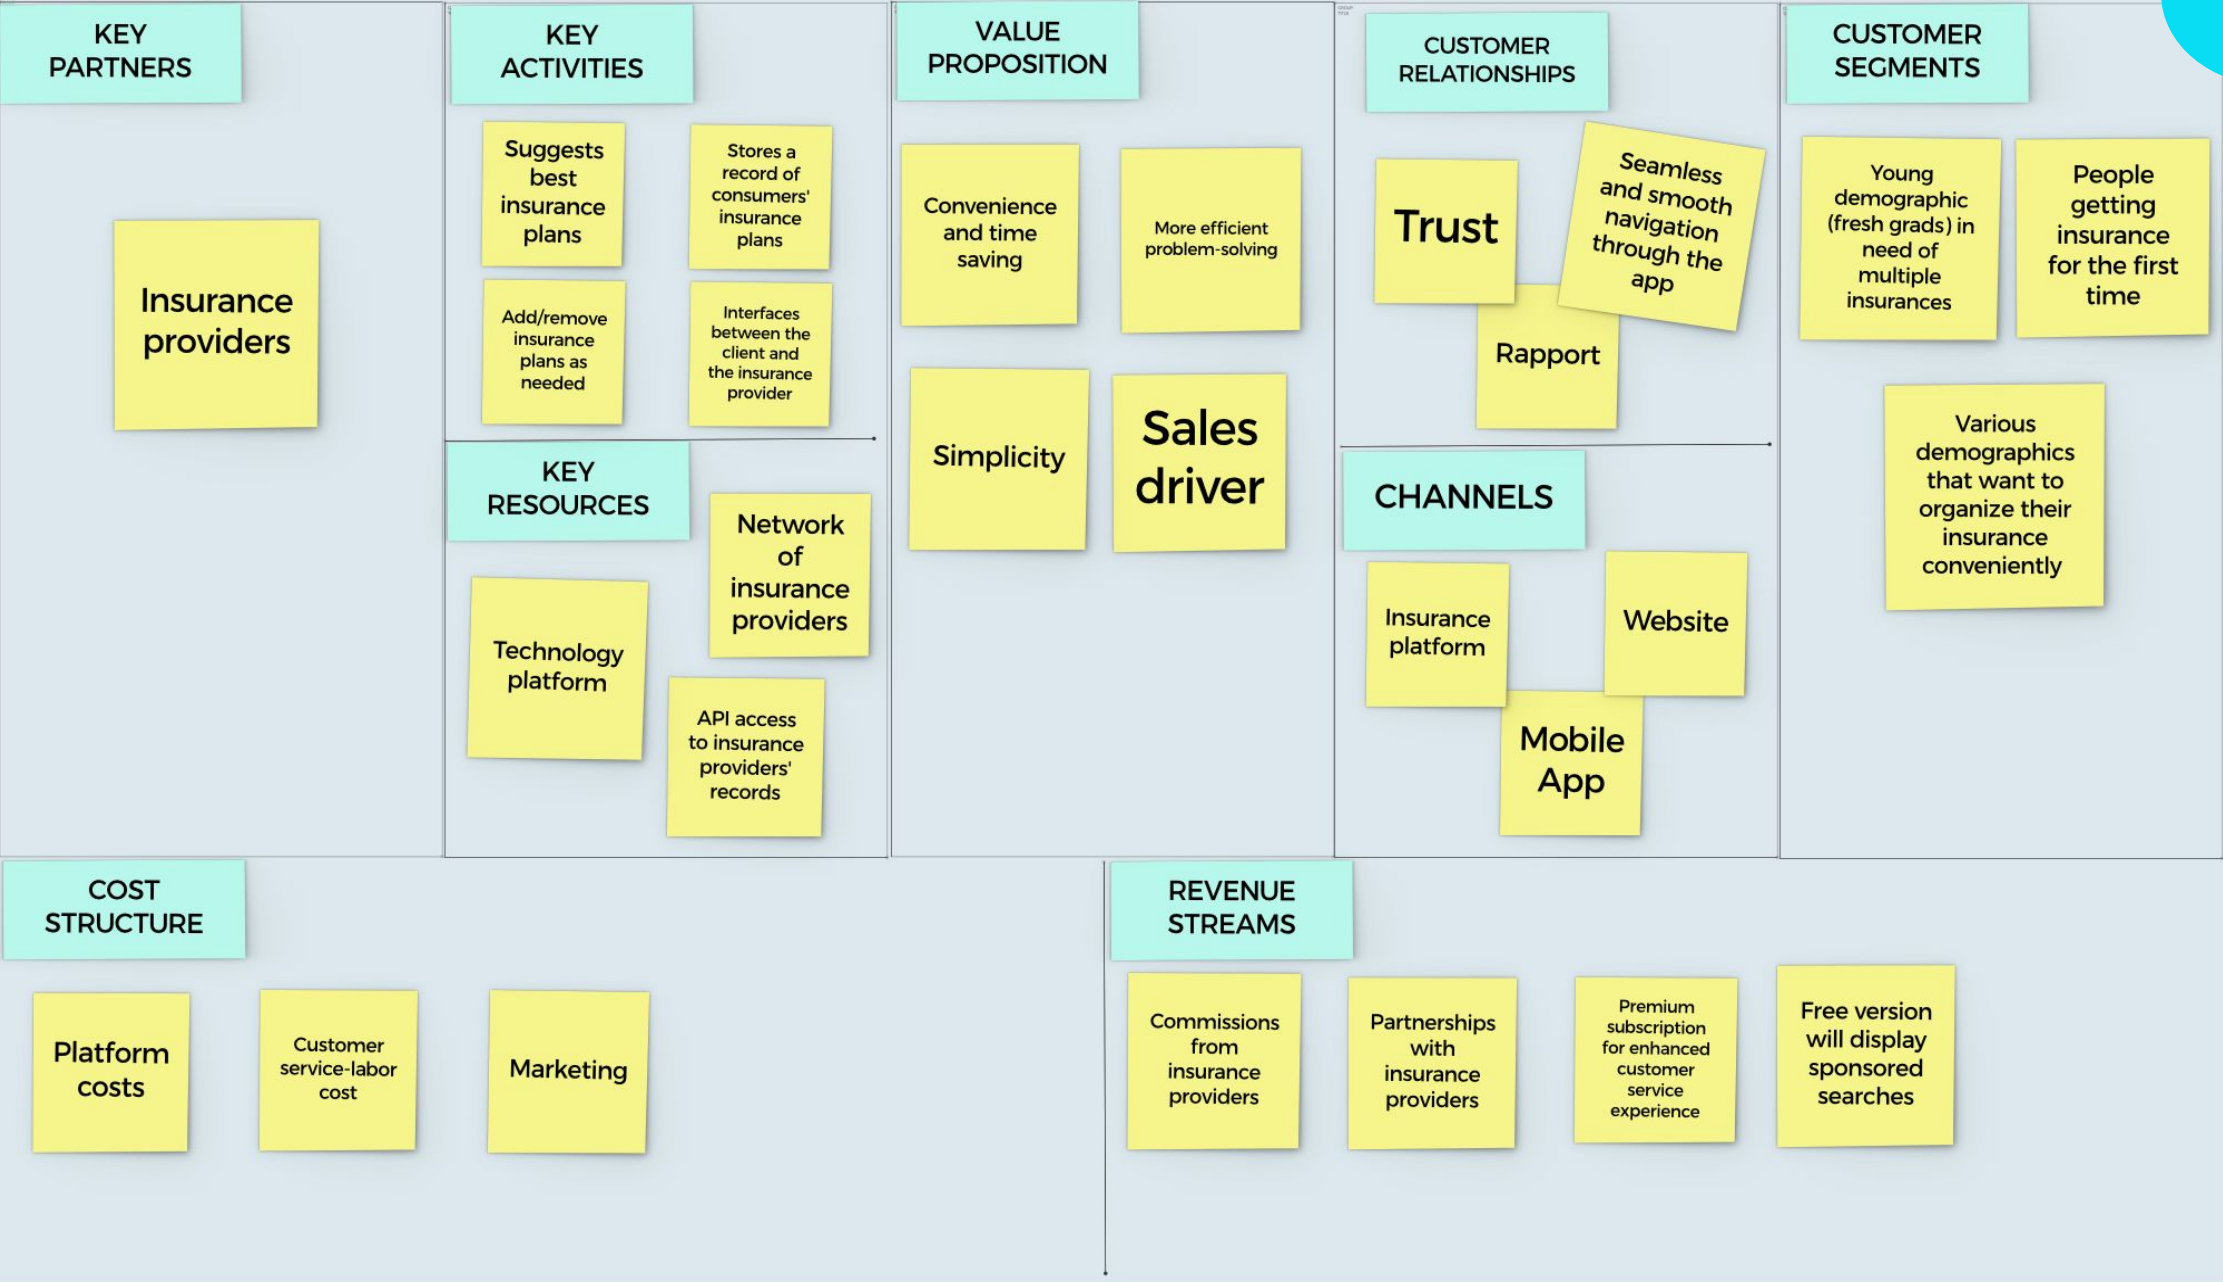

A dynamic and interactive questionnaire that helps you pick out what plans you need to get

An app that customers could select service issue from the list, follow procedures to resolve query, and connect to 7/24 chatbot and professionals to help them out
